ATTN: TOM TOMASSETTI

**Re: FORMER BAYONNE BARREL & DRUM PROPERTY
BUILDING NO. 6 MATERIAL HANDLING AND DISPOSAL GUIDANCE
150-154 Raymond Boulevard
Newark, Essex County, New Jersey
Code Project No. 251279**

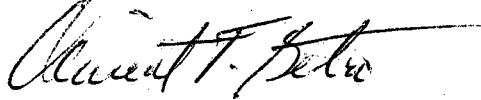

Dear Mr. TOMASSETTI:

On April 22, 2004, Code Enviro-Sciences, L.L.C. (CODE) technical personnel were on site to evaluate demolition debris in the Building No. 6 area at the above-referenced site. This debris is located on top of an existing un-demolished concrete slab containing vinyl tile (flooring), in poor and broken condition and may be considered friable. The floor tile was laboratory tested as "positive" for asbestos containing material (ACM). Upon our inspection of the debris area, CODE recommends the following procedure to handle the Building No. 6 debris:

1. Remove the uncontaminated demolition debris to within 1 foot above the existing floor tile that was observed to be on top of a concrete slab.
2. Utilize amended water to saturate the floor tile and concrete slab surface and the remaining debris, in an effort to contain dust and asbestos fiber dispersion.
3. "Hand" remove and segregate the existing floor tile material from the remaining debris and concrete slab surface.
4. Containerize the floor tile (use appropriate container) for transportation and disposal to an approved landfill.
5. Collect the remaining debris and place this debris in a separate stockpile.
6. As a precautionary measure, dispose of the debris in the separated stockpile (No. 5 above) as asbestos bearing waste (ID-27A).

Please contact us if you have any questions regarding the above.

Respectfully submitted,
CODE ENVIRO-SCIENCES, L.L.C.
